

WATCH DOG

-Electrical Protection System-

The Watch Dog is an electrical protection system that keeps your machine tool safe from electrical malfunctions in the incoming power. This system is a barrier between your machine tool and the line in. It protects against all power malfunctions such as brown outs, phase imbalances, phase reversal, phase loss, power over voltage, power under voltage incorrect sequencing and rapid short cycling. Every one of these power malfunctions can be very harmful to your machine tool costing you hundreds or even thousands of dollars in repairs. The Watch Dog monitors the incoming power to the machine tool and cuts the power if any of these are detected. Once tripped, the system requires a manual reset to prevent an auto-reset on a prolonged fault.

- Fully programmable with LCD diagnostic display
- Easy to configure
- 25 fault memory storage
- Manual reset to prevent auto-reset on prolonged fault
- Power o.k. indicator lights
- Dimensions: 10" x 10" 6"
